

ChronicleAI - Never Lose the Why

Preserving Organizational Knowledge Through AI

Every time someone leaves, a piece of your company's memory leaves with them. The knowledge remains—but the context is lost.

ChronicleAI reconstructs the context behind every decision, making organizational knowledge searchable, explainable, and permanent.

THE PROBLEM

Knowledge doesn't disappear. It becomes **unreachable**.

The information still exists across GitHub, Slack, docs, and meetings. What's missing is the reasoning — nobody can answer why.

Slow onboarding

Repeated mistakes

Knowledge silos

Rising maintenance cost

**Lost organizational
memory**

WHY THIS MATTERS

“Why did we even use Redis here?”

A senior engineer who built the system leaves the company.

Six months later, a new engineer must modify what they built.

They search Slack, PRs, and docs — the reasoning is scattered.

Two days pass. Still no clear answer to “why.”

Result: fragile code left untouched, or working code rebuilt from scratch.

The same scenario repeats thousands of times a year, across every growing engineering team.

OUR SOLUTION

ChronicleAI turns scattered history into **connected reasoning**.

An AI-powered Organizational Memory Engine. Commits, PRs, Slack, docs, and meetings are connected into one unified Knowledge Graph.

GitHub

Slack

Meetings

Docs

Email

YOU ASK, IN PLAIN ENGLISH

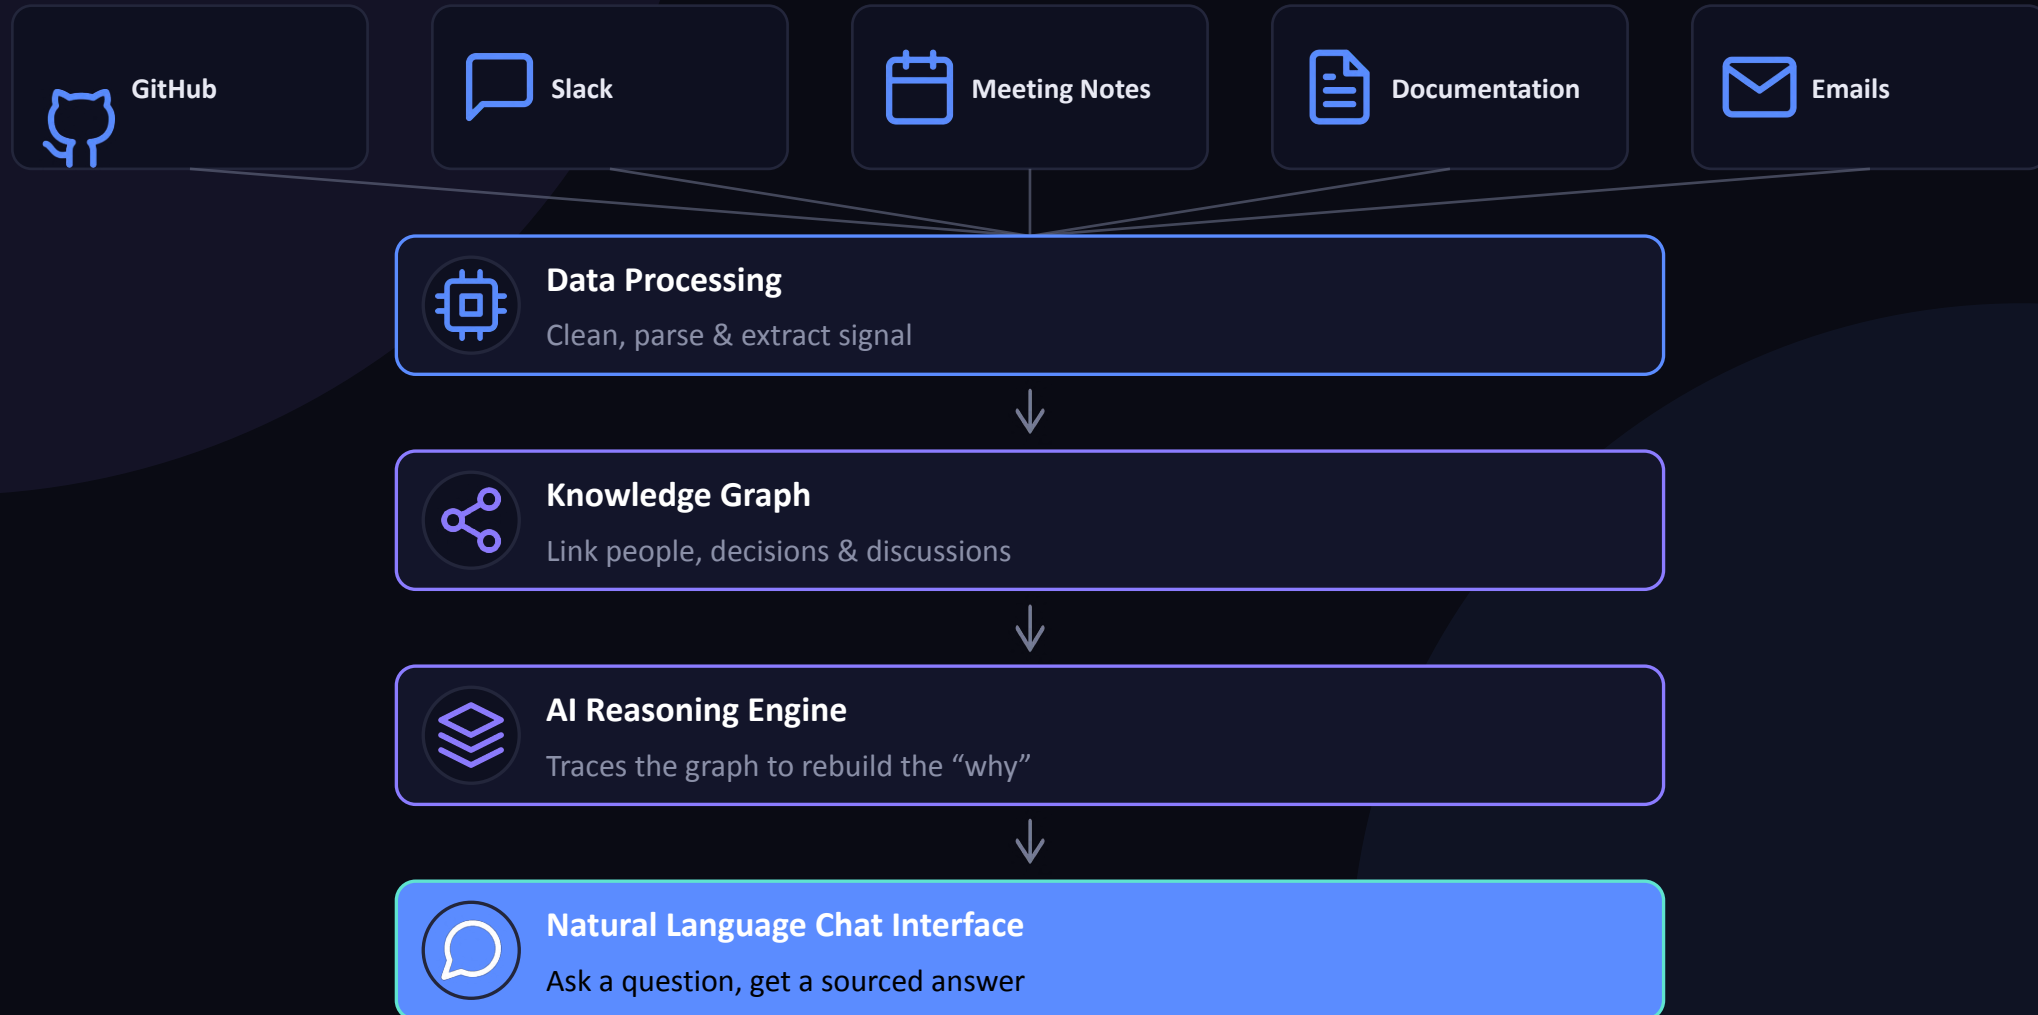

- ❓ Why was Redis introduced?
- ❓ Why did we migrate from MongoDB?
- ❓ Who approved this architecture?
- ❓ What discussions led to this?

Full reasoning, reconstructed.

Every answer traces commits, discussions, docs, and people — not a guess, a reconstruction.

From scattered signals to reconstructed reasoning.

KEY FEATURES

What ChronicleAI actually does for you.

Decision Timelines

See the full history of why a system evolved this way.

Natural-Language Q&A

Ask questions in plain English. Get sourced answers.

Contributor Context

See who was involved — even after they've left.

Cross-Source Linking

GitHub, Slack, docs & email connected automatically.

Source-Cited Answers

Every answer links back to the original evidence.

Unified Knowledge Graph

One connected map of people, decisions & context.

We reconstruct **reasoning** — not just retrieve documents.

✕ EXISTING TOOLS

Search within one tool at a time

Returns documents or messages

No sense of who decided what, or why

Context dies when the person leaves

✓ ChronicleAI

Connects across all tools simultaneously

Returns the full reasoning chain

Graph of people ↔ decisions ↔ discussions

Context preserved & queryable indefinitely

EXPECTED IMPACT

Organizations that remember, move faster.

Faster Onboarding

Context in hours, not months

Fewer Repeated Mistakes

Decisions aren't re-litigated
blindly

Lower Maintenance Cost

Engineers modify with
confidence

Preserved Knowledge

Survives past employee turnover

When someone leaves, their knowledge shouldn't leave with them.
